\* From 25th March, 1916, to 31st January, 1919, the official f.o.b. price of wheat for flour for home consumption was 4s 10½d. per bushel. This included 3½d. handling and commission charges; but city millers, handling grain for their own mills obtained it for 1½d. per bushel less than the f.o.b. price, so that the price of wheat for flour for home consumption was 4s. 9d. per bushel (on trucks), Sydney. On 1st February 1919, the price was raised to 5s per bushel, and to 5s. 6d. on 1st October, 1919, to 6s. 6d. on 3rd January, 1920, to 7s. 8d. on 31st January, and to 8s. 10d. on 12th February, 1920, for old seasons and imported wheat. Gristing of new season's wheat, 1920-21, began about 15th November, 1921, the price at the mill being 9s. per bushel.

## No. 81.—Wheat Harvest, 1920-21.

In January last a preliminary statement was issued in which it was estimated that the yield of grain would be 18,434,000 bags, equivalent (on the basis of 3 bushels to the bag) to 53,302,000 bushels, to be obtained from 3,107,500 acres.

The actual results disclose that 3,124,370 acres, an increase of 16,870 acres above the January estimate, were harvested for grain, yielding 18,468,000 bags, or 34,000 bags above the estimate.

The bags of wheat received at Darling Island were each found to contain 2·9086 bushels on the average; therefore, the actual harvest represents 53,715,840 bushels, a decrease of 1,586,160 bushels as compared with the January estimate.

The unfavorable weather of December last is reflected in the production of the Western Slopes Division, which suffered most from wind and rain storms; the Central and South parts of that division show reduced yields as compared with the earlier estimate. In the remainder of the wheat belt the harvest exceeded the estimate.

The highest yield per acre is in the North-Western Slope, 21·2 bushels per acre; and the lowest, 15·8 bushels per acre, in the South-Western Slope. The average yield for the whole State, 17·2 bushels per acre, for the current season, is the greatest since 1903-4.

The area under hay was 524,680 acres, an increase of 3,180 compared with the January estimate; and the yield 827,290 tons, or 43,710 tons less than estimated. The average yield for the State was 1·6 tons per acre.

The following table shows the actual results of the wheat harvest in 1920-21 in the principal divisions of the State:—
